FitBuddy

Demonstration of Proposed Features

Demo walkthrough and speaking notes | Use synthetic sample data

Demo purpose

Show how a user creates a workout plan, reviews supporting guidance, requests a change, and how an authorized coach reviews saved plan versions.

Sample demo profile

Name: Alex Demo | User ID: DEMO-001 | Age: 28 | Weight: 72 kg
Goal: muscle gain | Intensity: medium

Walkthrough

1. Home page and input form

Say: FitBuddy collects basic details and the user’s goal and preferred intensity.
Show: clearly labeled form fields and required-field validation.

2. Generate a 7-day plan

Say: the app uses submitted preferences to request a structured weekly routine.
Show: daily workout focus, warm-up, exercises, and recovery guidance.

3. Show the nutrition or recovery tip

Say: this concise tip complements the selected fitness goal.
Show: a practical, general suggestion below the workout plan.

4. Submit feedback

Enter: Please add more cardio and include an extra rest day.
Say: user feedback can guide a revision when preferences change.

5. Review the revised plan

Show: revised schedule reflects the feedback, and the original plan remains available.

6. Open the coach/admin overview

Show: the demo user and original/updated plan versions in the authorized view.

Feature-to-evidence checklist

Input and validation: submit valid data; show a missing-field message.
Plan generation: show all seven days and readable workout guidance.
Supporting tip: show a concise goal-related suggestion.
Feedback: submit a change request and display the revised plan.
Plan history: confirm original and updated versions are both retained.
Admin overview: show records only to authorized staff.

Closing statement

FitBuddy turns a goal into a structured starting plan and provides a feedback loop for refining it. AI output is general fitness guidance and should be adapted to the user’s abilities; it is not medical advice.

Before recording

Use synthetic data, hide API keys, verify the server is running, and keep the demo focused on the user flow. Do not display real users’ personal information.
