# FitBuddy

## Project Communication Plan

A simple plan for keeping the team, faculty, and project reviewers aligned

### Communication goals

Share progress clearly, surface blockers early, keep project files consistent, and coordinate phase-wise work through the public project repository.

### Who communicates with whom

#### Team members

Post task updates, share code changes, review work, and raise blockers to the team.

#### Team lead / coordinator

Maintain task assignments, meeting notes, repository organization, and status summary.

#### Faculty mentor

Receive project selection, team membership, milestone status, and requests for guidance.

#### Demo audience / reviewers

Receive the demonstration, project purpose, workflow, benefits, and final output.

### Channels and cadence

Team chat: brief coordination and urgent blockers; check daily during active work.
Weekly meeting: review milestones, assign next tasks, and record decisions.
GitHub repository: source code, phase documents, issues, and reviewed changes.
Faculty update: share progress at milestones or when guidance is needed.
Demo video: explain purpose, use, execution, and final output as required.

### Team update format

Done: completed work. Next: planned work. Blocker: what is stuck and who can help.
Owner and due date: person responsible and expected completion date.

### Escalation and records

Raise blockers in team chat promptly. If unresolved, contact the team lead, then faculty.
Record decisions, task ownership, and links in the repository or meeting notes.

Suggested plan based on the FitBuddy project submission brief; agree on actual tools and schedule as a team.
