FitBuddy

Team Involvement in the Demonstration

Suggested role split for a clear, balanced team presentation

Four-person team roles

Member 1 - Host and project overview

Welcome the audience; introduce FitBuddy, the user problem, purpose, and agenda.

Member 2 - Solution and technology

Explain the user flow and briefly introduce FastAPI, Gemini, Jinja2, and SQLite.

Member 3 - Live application walkthrough

Enter sample details, generate the 7-day plan, and show the supporting tip.

Member 4 - Feedback, records, and closing

Submit feedback, show the revised plan and admin view, then summarize benefits, limitations, and next steps.

Shared responsibilities

Before the demo: all members rehearse, check the application, and review the flow.
During the demo: one person controls the screen at a time; others support Q&A.
After the demo: each member answers questions about their own contribution.

Adjusting for team size

2 members: Member A covers overview and architecture; Member B demos features.
3 members: combine solution/technology with overview; split live walkthrough and close.
5 members: add a dedicated Q&A/technical support role or test coordinator.

Handoffs and timing

Use brief verbal handoffs: "Now we will show the generated plan." Keep transitions smooth and leave time for questions. Keep the full demo within the agreed limit.

Presenter checklist

Use synthetic profile data, hide credentials, rehearse each handoff, and have a backup screenshot or recording ready in case a live AI request is delayed.

Roles are suggestions. Assign actual names based on team size and each member’s contribution.
