FitBuddy

Data Flow Diagram

Level 1 view | Main data flow for workout creation, feedback, and coach review

FLOW 1 - GENERATE A PLAN

1. User submits details through the web form to FastAPI.
2. FastAPI validates fields and sends goal/intensity context to Gemini Pro for a 7-day plan.
3. FastAPI sends the goal to Gemini Flash for a concise nutrition or recovery tip.
4. FastAPI stores user details and the original plan in SQLite, then renders the result page.

FLOW 2 - UPDATE WITH FEEDBACK

1. User sends feedback and user ID. FastAPI retrieves the original plan from SQLite.
2. FastAPI sends the plan and feedback to Gemini Pro; the revised plan is saved in SQLite.
3. FastAPI returns the updated result page to the user.

FLOW 3 - COACH REVIEW

Coach/admin requests the user overview. FastAPI reads user and plan records from SQLite and renders the admin page. Access should be restricted to authorized administrators.

Conceptual diagram based on the supplied FitBuddy project brief; implementation details may vary.
